Just install the plugin in the Joomla 3 interface, fill in the data received from the company A SMS, s.r.o., in the plugin administration and start using.

Language versions of the plugin : **SK, GB**

The payment plugin includes an interface for automatic updates from the Joomla system administration. In this way, we provide clients who have purchased this product in the future to automatically and free of charge update to the latest versions. This plugin is licensed [GNU/GPL](#).

This version of the payment plugin supports payment authorization.

Establishment and technical implementation Mobile payment

The mobile payment service is intended for so-called "immobile content" means all goods and services that do not end on a mobile phone. Through the service, you can pay, for example, to highlight advertising. After entering the identifier and encryption key, the plugin is then ready for active operation.
